

Senior Structural Engineer

Engineering Link
Toronto, ON

Engineering Link is growing.

We are looking for a **Senior Structural Engineer** to join our team. The role offers a wide variety of technical challenges on projects and meaningful client-facing responsibility.

In this role, you will be responsible for overseeing small to large scale projects. You will be involved in managing client relationships, and leading structural design, analysis, mentoring, and project management for a variety of projects, including commercial, institutional, industrial, and residential.

Looking for career growth and want to be a driver of the business; we offer that.

Join us and take a deep dive into building strong client relationships, working on new buildings and existing structures, and driving business growth.

You have a strong background in design and management of structural engineering projects, including:

- Managing/overseeing projects.
- Structural design of new buildings.
- Exposure to renovations and additions of existing buildings.
- Report writing, fee proposals, and invoicing.
- Managing multiple projects and clients at any given time.
- Mentoring junior staff.
- Excellent written and verbal communication skills.
- Marketing to existing and new clients.

As part of the Structural department at Engineering Link, you will have the opportunity to experience engineering on many levels. You will work closely with colleagues and senior management on projects throughout all phases.

This is a perfect opportunity for an individual looking to build their career with a growing and reputable structural engineering firm.

The ideal candidate is energetic, self-motivated, and enjoys working in a fast-paced environment. Someone who has a strong technical background and is highly organized and pays attention to detail in every aspect of their work.

Engineering Link offers an open, collaborative work environment and is involved in a variety of commercial, institutional, recreational, healthcare, residential, and other sector projects across Canada. Engineering Link is focused on offering structural engineering services as they relate to the science of the built environment. In addition, we have a building envelope department with which you would collaborate.

Desired skills, responsibilities, and qualifications you will need to have:

Skills

- Able to focus on multiple projects at one time.
- Entrepreneurial: ambitious, client-focused, and quality driven.
- Proactive: takes initiative, analytical, innovative, and is a natural problem solver.
- Team-player: someone who builds positive relationships with colleagues, clients, and acts as an ambassador for Engineering Link in the field.
- Strong project management and coordination skills. Ability to coordinate effectively with project structural teams.
- Experience preparing proposals, delivering presentations, and reviewing technical and financial information with clients and stakeholders.
- Excellent understanding of theory and concepts. Is seen as a technical expert, mentors others, and gains the trust of clients through excellent project delivery.

Responsibilities

- Lead projects from definition, through planning, design, and ensure quality delivery to clients.
- Responsible to design and detail structural elements, including design and calculations, computer modelling, and analysis.
- Prepare detailed design calculations, layouts, project specifications, schedules, reports, plans, designs, and cost estimates.
- Ensure project schedules are met.
- Investigate field and design problems.
- Conduct site visits and inspections.
- Participate in client meetings, facilitating solutions to design issues, providing status updates, and focuses on relationship building and business development.
- Peer review of structural designs prepared by junior/intermediate staff.
- Coaching and mentoring junior/intermediate engineers and designers.
- Interaction with clients, as it relates to marketing and the pursuit of new work.

Qualifications

- Bachelor's degree in civil/structural engineering.
- Professional Engineer registered in Ontario, with eligibility to register in other Canadian provinces/territories.
- Minimum 10 years' relevant experience in structural engineering, design, or project management.
- Experience with Microsoft Office and software such as ETABS, SAFE, STAAD, Navisworks, and Bluebeam.
- Technical competency in the design of structural building systems.
- Knowledge and understanding of relevant design standards and codes.
- Regularly updates their own technical knowledge and skills and stays current in engineering and best practices.

A resume is required when applying.

Engineering Link is committed to promoting diversity and employment equity.
